## Termite Bait Station Benefits:

- » Long term approach to termite protection.
- » Greater degree of safety for children and pets.
- » Chemicals used don't contaminate your soil or surrounding water.
- » No required intensive digging or drilling on your property, damaging aesthetics.
- » There are no large holes drilled through the walls, floors, or foundations of your home.
- » More environmentally responsible compared to soil treatment, which may require use of hundreds of gallons of pesticide.
- » In many cases, the termite colony is completely eliminated. (Studies indicate that liquid treatments don't normally eliminate termite colonies).

## Soil Augers

**Soil augers** are used to dig holes that fit popular termite bait stations. Their bits help pull the auger into the ground with each twist performed with a cross handle.

**Regular Augers** are designed for most soil conditions.

**Mud Augers** are designed for heavy, wet, or clay soils.

**Dutch Augers** are designed for heavily rooted areas.

**Open-Faced Augers** feature an aggressive cutting head that is great for mud, clays, and hard-pan soils.

## Sentricon® Bait Station Installation

## 36" Two-Piece Tile Probe

402.93

The two-piece tile probe is used for locating underground obstructions.

## Station Puller

400.68

The Station Puller is designed for easy removal of termite bait stations.

## Compact Slide Hammer

400.96

Slide Hammers are used with the Insertion Tool for shearing roots during installation or inspection of Sentricon® bait stations.

## Insertion Tool

400.67

Used with AMS slide hammers, the Insertion Tool is used for cutting roots that have grown inside the Sentricon® Bait Station. It's also used for the initial installation of the bait station. The cylinder portion of the Insertion Tool fits inside the bait station and allows the station to be pounded into the borehole for a tight fit. A tight fit inside the borehole allows for increased termite activity.

## Termite Bait Station Pliers 22099

**NOW AVAILABLE!**

Save time during the station inspection process with Termite Bait Station Pliers. These pliers are used for removing bait from 2" bait stations. They will work with Sentricon® and Hex-Pro® Systems.
